SALES DASHBOARD

Analysis of Sales Performance

Monthly trends • Customer demographics • Product categories

Project Presentation

Prepared from the provided sales dashboard

Project Introduction

A visual overview of sales performance across time, customers and products.

This project uses a sales dashboard to explore how sales vary by month, gender, age and product category.

- Track the overall sales pattern from January to December 2023.
- Compare customer sales by gender and age group.
- Identify product categories contributing the most revenue.

DASHBOARD FOCUS

Sales trends and customer segmentation

TIME PERIOD

Displayed dates cover 2023

PURPOSE

Support data-based decisions

Project Objectives

What the dashboard is designed to help us understand.

01	**Monitor sales trends**	Observe changes and peaks in monthly sales.
02	**Compare customer groups**	Understand the sales split by gender and age.
03	**Evaluate product categories**	Rank categories by their total sales amount.
04	**Explore quantity and revenue**	Look for patterns between quantity and amount.
05	**Enable interactive analysis**	Use product, date and gender filters to narrow results.

Dataset Description

Fields visible in the dashboard and how they are used.

DATE

Used to analyse sales over time and filter specific dates.

TOTAL AMOUNT

Represents the sales amount used in the trend and category charts.

QUANTITY

Used to compare quantities with sales amount.

GENDER

Splits sales between female and male customers.

AGE

Shows sales amount across customer ages.

PRODUCT CATEGORY

Includes Groceries, Home Decor, Electronics, Beauty and Clothing.

Note: The source screenshot does not show the full raw dataset or record count. Values shown are read from the dashboard.

KPIs Used

Main measures and summary values available in the dashboard.

TOTAL SALES BY CATEGORY

0.96M

Groceries

SECOND-HIGHEST CATEGORY

0.79M

Home Decor

GENDER SALES SPLIT

54.01% / 45.99%

Female / Male

HIGHEST MONTHLY PEAK

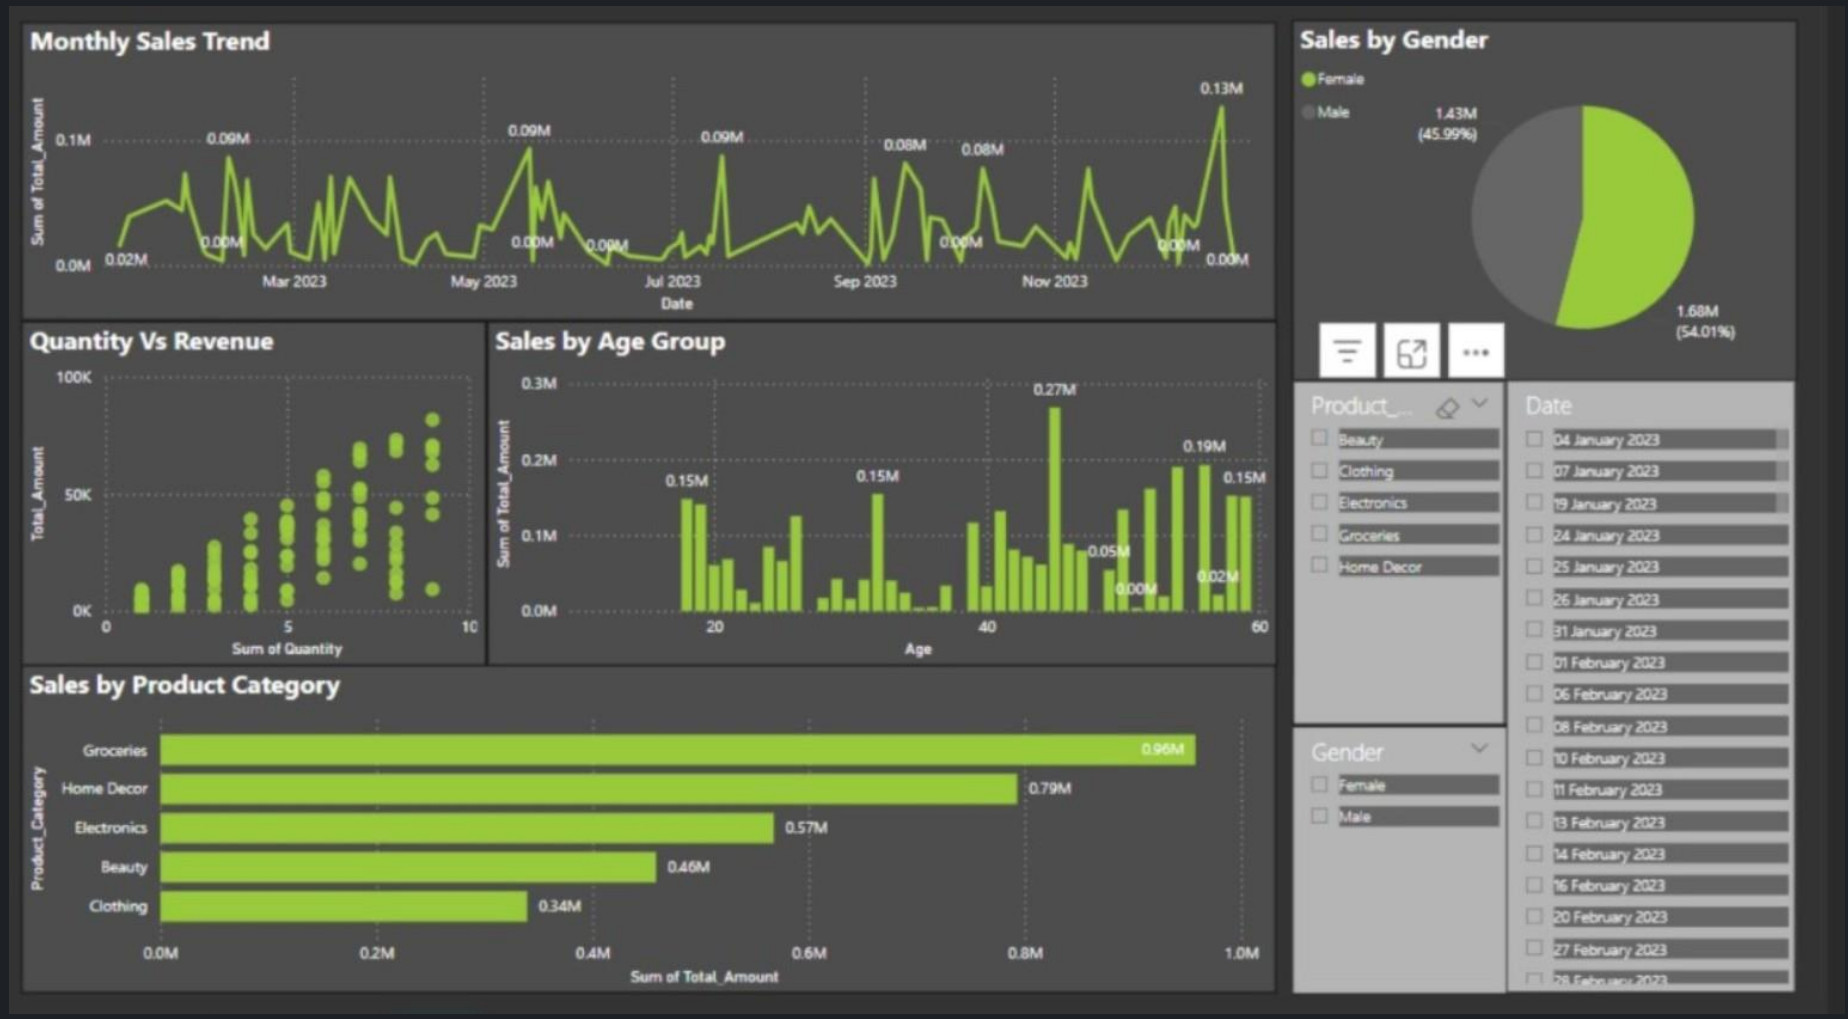

0.13M

Visible chart peak

Other dashboard measures: sum of total amount by age, and the relationship between sum of quantity and total amount.

Dashboard and Visualizations

The dashboard combines five visuals with interactive filters.

Visuals: monthly trend • quantity vs revenue • sales by age • sales by gender • sales by product category

Key Insights

Highlights observed from the supplied dashboard.

GROCERIES LEADS

Groceries records the highest category sales at about 0.96M.

GENDER SPLIT IS FAIRLY BALANCED

Female sales are about 1.68M (54.01%) and male sales about 1.43M (45.99%).

HOME DECOR IS SECOND

Home Decor contributes around 0.79M, followed by Electronics at 0.57M.

SALES FLUCTUATE OVER TIME

The monthly line varies, with the highest visible peak around 0.13M.

CLOTHING IS LOWEST

Clothing has the lowest displayed category total, at about 0.34M.

These are descriptive findings; additional analysis would be needed to explain why the patterns occur.

Conclusion

Summary and possible next steps.

The sales dashboard gives a clear snapshot of sales performance across time, customer groups and product categories.

- Groceries is the leading category, while Clothing has the lowest displayed sales.
- Sales are distributed fairly evenly by gender, with female sales slightly higher.
- Filters make it possible to explore specific dates, products and customer groups.

Next step: investigate seasonal patterns, category-level performance and customer behaviour in more detail.
